

# WHY POPCORN?

**42**  
QUARTS  
CONSUMED

**PER PERSON  
ANNUALLY**

AMERICANS CONSUME  
**13 BILLION**  
QUARTS OF POPCORN ANNUALLY

**MORE THAN 1 BILLION POUNDS IN SALES PER YEAR**

## POPCORN:

Our popcorn is 0% fat and is prepared in a unique and innovative process, combining flavor, agility, technology and a highly healthy product.

Our exclusive corn goes through an innovative process of special treatment for 40 days by salting the grain of the corn internally to be able to give the salty flavor in the popcorn without having to add salt after being ready for consumption.

So our corn is much healthier because we do not need to use any type of oil and fat in our process.

You will not find our maize anywhere other than on PopCorn King machines.

Popcorn is a universal food and caters to customers of all ages and classes, plus the modern, healthy concept with 0% fat. Being rich in fiber and carbohydrates, decreasing premature aging, heart disease risks and cholesterol. There is a guaranteed public!

**Popcorn is the most economical and healthy food in the world!**

# POPCORN = HEALTHY?

The popcorn hull is the source of much of the food's nutritional value. Hulls contain beta-carotene, lutein and zeaxanthin that are important in maintaining eye health. They also contain polyphenols with antioxidant and anti-inflammatory properties believed to protect against cancer and cardiovascular disease. Researchers at the University of Scranton, PA, recently reported that popcorn contains up to 300 mg polyphenols per serving which is more than 60 percent of the polyphenols provided by fruits and vegetables in the average American diet.

Popcorn also contains a number of vitamins: folate, niacin, riboflavin, thiamin, pantothenic acid, and vitamins B6, A, E and K. A serving of popcorn contains about 8 percent of the daily value of iron, with lesser amounts of calcium, copper, magnesium, manganese, phosphorus, potassium and zinc.

# POPCORN = LIGHT?

Air-popped  
popcorn has

only 30 calories  
per cup

## USA Market

61% of the popcorn consumed in the world is the United States. The United States is the largest vending machine market in the world.

The American vending machine market has 1 machine for every 70 inhabitants. American consume 14 billion quarts of popped popcorn annually or 43 quarts per man, woman and child.

Popcorn is the healthiest and most economical food in the world.
